

To Whom So Ever It May Concern

Respected Sir/Ma'am,

I'm a penultimate-year student at Maharaja Surajmal Institute of Technology, where I'm studying a Btech in information technology. I'm also a fellow online student at the Indian Institute of Technology in Madras, where I'm doing a BSc. I approach any technology with a very open mind. I enjoy looking into possible answers because I believe that with enough work, every problem can be resolved.

I am fluent in Java and am now learning Python and web development. I am effecient in working with Linux environment because I believe in working in various contexts and try to adapt in various environments depending on the situation.

I am rewarded with the prestigious Google Generation Scholarship as well along with the Microsoft learn student ambassador tag. Aside from technical subjects, I believe creativity can give anything life in an engaging way. I have two plus years of professional Adobe Creative Suite experience as a graphic designer.

I believe I am a strong candidate for the position because I am willing to give it my all. I always give a problem my all-out effort in an effort to find a solution.

Thanking You,

Your Scincerely,

Sunaina Rustagi
